DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 3-11, and 13 are allowed.

The prior art neither teaches nor fairly suggests an image input device including: a mirror body which is designed in a polygonal prism form, a linear sensor, a housing in which the mirror body and the linear sensor are accommodated and a slender incidence window for passing the image pickup light there through, and support legs which are **formed at the formation side of the incidence window of the housing so as to expand from the housing to the outside and support the housing, the support legs being retractably provided in the housing**, as claimed in Claim 1.

The prior art neither teaches nor fairly suggests an image input device including a housing having a slender incidence window to pass image pickup light from a subject therethrough into the housing, a mirror body with has mirror faces for reflecting the image pickup light from the incidence window and rotatably or swingably provided in the housing, a linear sensor which is disposed in the housing and takes the image pickup light reflected from the mirror body to subject the image pickup light to photoelectric conversion, **a plurality of illuminators that are provided in the housing, wherein the illuminators are successively turned on during one scan period to light up the subject**, and an external interface located within the housing through which image pickup information is transmitted to the outside.
